

PRESS RELEASE

ABORA SOLAR CLOSES SUSTAINABLE LENDING INVESTMENT ROUND OF €110,900 ON BOLSA SOCIAL

Zaragoza, 21 November 2024 | Abora Solar, an Aragonese company dedicated to the development of hybrid solar panels (PVT), has successfully completed a round of sustainable lending through Bolsa Social, exceeding 110% of its initial target. With the participation of 87 impact investors, the company has received solid backing for its innovative aHTech® technology, recognised for its certified efficiency of 89%.

Since its foundation in 2017, Abora Solar has installed more than 40,000 m² of hybrid solar panels in 38 countries and has 15 international partners, consolidating its global presence. The company is characterised by its constant innovation and commitment to sustainability, evidenced in its 'Aboratorio', a space where it develops new generations of hybrid panels and integrates them with complementary technologies. In addition, the company actively supports the Juslibol Juvenile Centre in Zaragoza through various initiatives that seek to improve the quality of life of its young people and encourage their reintegration into society. On the other hand, it also collaborates closely with the AMASOL Foundation, a non-profit organisation that supports both women facing motherhood alone and reconstituted families, providing comprehensive support to all forms of families.

This dedication to equality and the well-being of its community is coupled with its commitment to the environment, making Abora Solar a company that not only innovates in technology, but also actively works to build a fairer and more sustainable future for all.

Alejandro del Amo, founder of Abora Solar, said: *"Completing this round of financing with Bolsa Social not only strengthens our production capacity, but also reaffirms our commitment to lead the transition to a cleaner and more efficient energy future. Having the backing of investors who believe in positive impact and sustainability is a key driver of our mission."*

Marta Abbad, COO of Bolsa Social, commented: *'At Bolsa Social, we understand that the promotion of clean energy is fundamental in the fight against the climate crisis. Abora Solar is a clear example of how innovation in energy efficiency can be a practical response to one of today's biggest challenges, and for us and our community of investors it is essential to support projects that work in this direction'*.

The funds raised will enable Abora Solar to purchase an automatic framing machine, key to improving efficiency and accuracy in the manufacture of hybrid PVT solar panels. The implementation of this machinery will reduce production times, minimise human error and ensure higher quality and consistency in assembly. It also reaffirms the company at the forefront of hybrid solar panel manufacturing, enhancing its competitiveness in the renewable energy market. A further step in its commitment to innovation and sustainability.

The role of impact investors, such as those in this round, is fundamental to support companies and projects that work towards a more sustainable and prosperous world, driving innovation and the creation of solutions that address global challenges.

About Bolsa Social

Bolsa Social is an impact investment ecosystem that brings together equity and debt investment, building the financial market of reference for impact investments and companies with positive values. It is the first crowdfunding platform authorised by the CNMV, and since its creation in 2015 it connects impact investors and companies that generate a positive social and/or environmental impact. Any type of investor (individuals, professionals, organisations, institutions...) can access investment opportunities in the capital of young companies with growth potential, or in the debt of more established social impact companies. The Bolsa Social community of more than 12,000 people has channelled more than 14 million euros in 52 rounds of financing to social and environmental impact companies.

About Abora Solar

Abora Solar, a Spanish manufacturer of hybrid solar panels, is an innovative and visionary company in the field of renewable energies, more specifically in the solar energy sector. Founded in 2017, the Spanish manufacturer has quickly positioned itself as a major player in the development of sustainable and high-performance solar solutions.

At the heart of Abora Solar's identity is a global approach to solar energy, offering the latest generation hybrid solar panel with the highest performance on the market, while providing a vision that encompasses the entire process: providing technical support in sizing and design and monitoring the operation of the installation. This allows the company to offer its customers, through its partners, turnkey solutions, including financing, for self-consumption projects in the residential, tertiary, industrial and heat network sectors.

In short, Abora Solar faces the future of solar energy, combining technological innovation with a deep commitment to the environment, accessibility and the improvement of society. The company's ambition is to be a major player in the energy transition towards a cleaner and more sustainable future.

Find more information about the company and our technology on our website, where you can see examples of the more than 300 installations executed with our aHTech® panel, including the largest hybrid solar installation in Europe: the 1,041 PVT of the Club Natació Barcelona. Discover the more than 300 installations in operation around the world, which represent nearly 40,000 m2 installed, on our website: www.abora-solar.com
